

## CENTRILLION POINT, CROYDON

**Client:** Wallace Estates

**Architect:** Thomasons

**QS:** Thomasons

**Value:** £3.6m

The project entailed the replacement of rainscreen cladding at Centrillion Point, a residential tower block in Croydon.

The existing cladding was removed and replacement rainscreen cladding installed along with cavity fire barriers.

This was a logistically challenging project, undertaking the works whilst the residential units of the building remained occupied. Another challenge was the location of the building, which is within a busy part of Croydon, adjacent to occupied premises.
